

Temporary Road Crossing

- Pedestrian access to a construction site was made safer by installing a temporary road crossing. Temporary speed humps were also installed to slow traffic down. Temporary signage was also installed (see photo below)
- The traffic system was easy to install over the existing road surface and easy to remove when the construction project was complete.
- Can be re-used

Restrictions

- Consider type of traffic using the area i.e. fork lift trucks would not be compatible with the installation of the speed humps
